The frontend of the project has 3 files.

- One lists the products.
- Second shows the product details with multiple images.
- Third is to book the orders.

The backend is in /admin directory and user name is 'a' and password is 'a'.

- It has add product page that adds products multiple images.
- The view product page shows product details with images. Here visibility of a product can be changed. Also products can also be deleted from the table.
- Order page shows the order details with customer and order details based on the order id.
- The change password page changes the password of the admin panel in admin table of DB.

The database has three tables

- Admin
- Products
- Orders
